SUMMARY

Software Engineering graduate building .NET and React applications with AI/LLM integrations, data integration, and AI agent workflows. Experience includes a four-month FPT Software internship, paid freelance work, and four-person capstone leadership. Configured repository harnesses and MCP context; developing DevWeave and Reference Studio.

EXPERIENCE

Software Development Intern 2025 | Four months

FPT Software

- Developed backend/frontend features for MovieTheater, a .NET/React cinema-booking internship training project using Clean Architecture.
- Collaborated with teammates on movie scheduling, seat selection, Redis caching, stale-data investigation, and cache invalidation.
- Coordinated initial development, testing, and documentation task allocation within the internship team.

Freelance Frontend Developer

ArWoh (client project)

- Designed and developed frontend interfaces and image-gallery presentation for the paid ArWoh artwork-gallery project.

EDUCATION

FPT University 2026

Bachelor of Software Engineering

PROJECTS

OboxSTEAM github.com/OboxSTEAM | oboxsteam.website

Team Lead & Full-Stack Developer | Four-month capstone

- Led a four-person .NET/Next.js STEAM capstone team across business rules, API contracts, UI/UX, and deployment.
- Configured repository harness documentation for business rules, architecture, and implementation plans; integrated MCP, CodeGraph, and OpenAPI tooling for coding-agent project/API context.
- Integrated AWS S3, Rekognition, SNS, MediaConvert, and Bedrock for learning-material storage and AI/LLM-assisted video highlights from mentor-captured project footage.
- Designed customizable portfolios for ages 12-18 with project evidence, images, video highlights, device previews, and public publishing for potential competition/study-abroad use.
- Replaced multi-step expert-manager curriculum review with direct review, contextual feedback, pinned comments, and chat.
- Deployed five Docker services on a 2-core, 2 GB RAM VPS: backend, frontend, PostgreSQL, Redis, and Nginx, with shared networking and domain routing.
- Integrated OpenTelemetry and Traceway for application traces, logs, runtime metrics, and external-service monitoring.
- Improved landing-page loading through server-rendered catalogs, responsive images, deferred features, duplicate-request removal, and scroll-animation cleanup.

GraphPaper github.com/Ch1mpleo/GraphPaper.FE

Frontend Developer | Two-person university project

- Built the Next.js/TypeScript frontend converting uploaded research papers into interactive Mermaid knowledge graphs.
- Refined graph spacing and presentation to reduce entity/connection overlap and make dense research information easier to explore.
- Contributed document-extraction/OCR integration with a teammate, completing a working upload-to-graph workflow.

DevWeave

Developer | Early-stage project

- Built initial setup, planning, and execution skill foundations for coding-agent workflows in new and existing software projects.
- Design project-knowledge maintenance for specifications, business rules, and cross-session decisions; installation helpers and continuity verification remain planned.

Reference Studio github.com/Ch1mpleo/reference-studio
Developer | In development
- Built a React/TypeScript reference library and initial canvas with Fastify and SQLite persistence to organize project-specific visual context.
- Design human-agent visual/motion workflows; working MCP tools, portable creative guidance, and approved system exports remain planned.

Visual Portfolio github.com/Ch1mpleo/visual-portfolio ch1mpleo.github.io/visual-portfolio
Frontend Developer | Personal project
- Redesigned an existing Astro/GSAP portfolio with a project showcase, revised skills display, and signature illustrations.
- Reworked its image section into a parallax gallery of inspirational video edits.
- Optimized video delivery and loading for the media-heavy portfolio gallery.

Interactive Educational Museums github.com/Ch1mpleo/MLN131-Visual ch1mpleo.github.io/VNR-Visual
Frontend Developer | University projects
- Built two React/TypeScript websites from teammate-prepared coursework, presenting political theory and Vietnamese history through visual narratives and archival imagery.
- Implemented interactive timelines and quizzes using GSAP, Motion, and adapted ReactBits components.

SKILLS & AWARDS

Technical Skills:
- AI agents and workflows: Cursor, Codex CLI, Claude Code, Oh My Pi, repository harnesses
- Agent context and workflow integration: MCP, CodeGraph, OpenAPI tooling, project specifications, business rules
- Backend: C#, .NET, ASP.NET Core, Entity Framework Core, REST APIs, Clean Architecture
- Frontend: JavaScript, TypeScript, React, Next.js, Astro, HTML, CSS, SCSS, Tailwind CSS
- Data: PostgreSQL, Redis; API and data integration
- Cloud and monitoring: AWS S3, Rekognition, SNS, MediaConvert, Bedrock, OpenTelemetry, Traceway
- Delivery: Git, Docker, Nginx, VPS deployment, GitHub Actions
- Interaction and visualization: GSAP, Motion, Mermaid

Languages:
- English: Intermediate (self-assessed); comfortable reading technical documentation
